Release 3.1A John F. Collins, Biocomputing Research Unit. Copyright (c) 1993-1998 University of Edinburgh, U.K. Distribution rights by Oxford Molecular Ltd

n.a. - n.a. database search, using Smith-Waterman algorithm with gap extension penalties as well as gap opening penalties MPsrch_nna

Fri Dec 25 06:17:41 1998; MasPar time 326.16 Seconds 543.181 Million cell updates/sec Run on:

Tabular output not generated.

>US-08-951-733-19 (1-3798) from US08951733.seq 3798

Description: Perfect Score: N.A. Sequence:

TABLE default Gap open 30; Gap extend 1 Scoring table:

Dbase 0; Query 0 Nmatch STD: 88822 seqs, 23323279 bases x

Searched:

Post-processing:

Minimum Match 0% Listing first 45 summaries

Database:

Mean 9.574; Variance 5.701; scale 1.679 n-issued 1:5_COMB 2:PCT9_COMB 3:backfiles1

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5569830
GENERAL INFORMATION:
APPLICANT: BENNETT, Alan
APPLICANT: DOWELL, Ann
APPLICANT: STOTZ, Henrik
TITLE OF INVENTION: PLANT INHIBITORS OF FUNGAL
TITLE OF INVENTION: POLYGALACTURONASES AND THEIR USE TO CONTROL FUNGAL DISEASE
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               83 HTNVSGADSKTVTDSYNASGTSSSNGGTDGNRSGADSYGSSKTAMTSRNRTGKTANNAVD 142

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chariton, A.J.; Baxter, N.J.; Lilley, T.H.; Haslam, E.; McDonald, C.J.; Williamson, M.P.
Choonald, C.J.; Williamson, M.P.
Tannin interactions with a full-length human salivary proline-rich protein display a stronger affinity than with single proline-rich repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            #domain signal sequence #status predicted #label SIG\

#title Analysis of three nodD genes in Rhizobium leguminosarum
blovar phaseoli; nodDl is preceded by nolE, a gene whose
product is secreted from the cytoplasm.

INATURE STAILAND NEGULATES THE EXPRESSION OF THE NOD ABCFE GENES WHICH ENCODE OTHER NODULATION PROTEINS. NODD IS ALSO A NEGATIVE REGULATOR OF ITS OWN EXPRESSION. BINDS FLAVONOIDS AS INDUCERS.

INATURE STAILANTY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL REGULATORS.

Mean 54.168; Variance 101.474; scale 0.534 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The first 21 AAs are hydrophobic glycoproteins of other herpesviruses. The first 21 AAs are hydrophobic with the exception of Arg at position 6. This sequence could correspond to a signal peptide for membrane insertion and may well be removed during translation and transport. AAs at positions 481-498 are strongly hydrophobic and have the characteristics of a membrane-spanning region. The carboxy terminal 11 AAs have a basic charge and may function as a cytoplasmic anchor sequence. Four potential glycosylation sites are present in the region between the putative signal sequence and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             37 pspsptetessagttgasaprrptgpdatpe-dstpvllrpwgrrsrrpcpsttrpltns 95

New Osteogenic polypeptide(s) and their dimeric proteins - useful in association with a matrix for bone reconstitution after orthopaedic and plastic surgery.

Disclosure; 51-53; 69pp; English.

The sequence encodes the prepro form of human osteogenic polypeptide-2 (hOP2-Pp). The protein is useful as a subunit of osteogenic proteins capable of endochondral bone formation, and allogenic and xenogenic implants in mammals. When implanted with a matrix, the polypeptide locally induces the full developmental cascade of endochondral bone formation and bone marrow differentiation. This can be used for optimal predictable bone formation to correct, egalocatized, and to treat non-union fractures. The polypeptide also have dental and periodorhal applicns, and may be used for cartilage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | :| ||: : |||| : |:|||| | :: ||

Claim 22; Fig 9; 123pp; English.

Claim 22; Fig 9; 123pp; English.

Wi8663 and Wi8664 are +2 and +1 frameshift mutations, respectively, of a sequence comprising fragments of the coding sequence of the human neurofilament subunit NF-H gene corresponding to nucleotides.

Claim of the Wild-type NF-H gene. This region contains GACAG motifs.

Frameshift mutants of the tau, ubiquitin, apolipoprotein E.

Frameshift mutants of the tau, ubiquitin, apolipoprotein E.

Microtubule-associated protein 2 (MAP-2), neurofilament subunit I. M

and H and amyloid A4 genes are claimed. All these genes share a common GAGAN motif (N-A, G, Cor T), which is the site of common GAGAN motif (N-A, G, Cor T), which is the site of common GAGAN motifies used for the production of antibodies, and small neuroscial sequences derived from frameshift mutants are used in the
                                                                                                                                                                                                                                                         Fragmented human NF-Will gene +1 frameshift mutant product.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Preatment of chronic renal failure - using an osteogenic protein/bone morphogenetic protein renal therapeutic agent or morphogen or renal mesenchymal progenitor cells morphogen or renal mesenchymal progenitor cells

Disclosure: Page 68-69: 113pp: English.

This sequence represents the mouse osteogenic protein, Op-2. This protein is used in a method for the treatment of a mammal having, or at risk of, chronic renal failure which comprises administering an osteogenic protein/bone morphogenetic protein (OP/BMP) renal therapeutic agent or morphogen. The method can be used for treating e.g. chronic renal failure, end-stage renal disease, chronic diabetic ephropathy, diabetic renal hypertrophy, hypertensive independent of a patient allowerulonephritis, hereditary nephritis, renal dysplasia, or a patient efflicted with e.g. glomerular hypertrophy, tubular hypertrophy, glomerulosclerosis, tubulointerstitial sclerosis or renal fibrosis. Such therapeutic agents can prevent, inhibit or delay the progressive loss of filtration rate (GFR) which slowly but inevitably leads to the need for common and the replacement, therapy.
nephropathy; glomerulopathy; hypertrophy; sclerosis; nephritis; mouse; dysplasia; fibrosis; glomerular filtration rate; GFR.

The present sequence represents the present invention describes methods used in the present invention. The present invention describes methods to selectively extracting an osteogenic protein (OP) from a mixture. The method comprises: (a) exposing the mixture to an antibody that specifically binds OP, separating the resulting antibody-protein complex from the mixture, and dissociating the complex. In the methods OP comprises a pair of oxidised subunits that are disulphide-bonded to form a dimer, and one of the subunits has an amino acid (aa) sequence sufficiently homologous to residues 335-431 of a 431 aa protein designated OPS, sequence given in the specification. In dimeric form OP is capable of inducing cartilage and endochondral bone formation in a mammal when disposed within a matrix implanted in the mammal. The methods are used for recovering the recombinant proteins from cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; osteogenic protein; hOP-1; murine; mOP-1; TGF-beta superfamily; transforming growth factor-beta; dimer; antibody; epitope; hippocampus; purification; implantable osteogenic device; bone formation; cranofacial; anomaly; skeletal; dental; endochrondral bone formation; oranofacial; non-union fracture; cartilage repair; osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12 glalcalggghgprpp-htc-pgrrlg-arerrdmgreilavlglpgr-prpragpaaar 67

                                                                                                                                                                                                                                                                                                                                                                              Antibodies with osteogenic protein binding specificity - used in purification of osteogenic proteins, and as antigenic proteins buildication of osteogenic proteins, and as antigenic proteins. Disclosure; Column 139-42; 129pp; English.

This sequence represents the murine osteogenic protein, moP-2. mOP-2 has homology with proteins in the TGF-Deta superfamily. Fragments of the mOP-2 protein can be used in the production of dimeric peptides which may be used in the generation of antibodies are capable of binding specifically to an epitope of the osteogenic protein and may be used in purification protocols. Osteogenic protein mOP-2, may be used in an implantable osteogenic device which allows predictable bone formation to correct acquired and congenital caranofacial and other skeletal or dental anomalies. They may be used to caranofacial and other skeletal or dental anomalies. They may be used to caranofacial and other skeletal or dental anomalies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      induce local endochrondral bone formation in non-union fractures and in other clinical applications including dental and periodontal applications where bone formation is required. Other potential applications include cartilage repair, e.g. in the treatment of osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           194 GPPLYQLGAATQARPPHASGPRRRLGCERAWNHSVREAGVPLGLPAPGARRRGGSASRS 253

The following of morphogenic or in-vivo morphogenic-stimulating agent - to prevent bone loss or increase, used for treating bone fractures, post-menopausal or senile osteoporosis, hyperparathyroidism etc. Disclosure; Page 122-123; 162pp; English.

The sequence is that of mouse osteogenic protein 2 (mOP-2) a morphogenically active protein which may be used as part of a morphogenically active protein which may be used as part of a morphogenically active protein which may be used as part of a morphogenically active protein which may be used as part of a morphogenically active protein which may be used as part of a morphogenically actives or other defects in skeletal reconstructure. Such diseases include chronic renal failure and other kidney diseases, osteomalacia, vitamin D deficiency-induced other kidney diseases, osteomalacia, vitamin D deficiency-induced other kidney diseases, osteomalacia, vitamin D deficiency-induced osteopenia or osteoporosis, postmenopausal females, aged individuals and individuals undergoing postmenopausal females, aged individuals and individuals undergoing dialysis. The loss of bone mass may result from an imbalance in bone resorption or bone formation, an imbalance of calcium or hosphate content and an individual or individuality or hormonally individuality.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequence given in 10. cDNA and protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       osteoporosis; hyperparathyroidism; skeletal microstructure defects; chronic renal failure; kidney disease; osteomalacia, vitamin D; deficiency-induced osteopenia, osteoporosis; Paget's disease; bone mass; imbalance; resorption; formation; dialysis; calcium; Mus musculus.
A novel mouse morphogenic protein, OP3, has the sequence given in R54934, and is encoded by CDNA of sequence (05390. CDNA and protein sequences were also provided for human osteogenic protein OP1 (055391, R54935), mouse OP1 (055392, R54936), human OP2 (053392, R54937) and mouse OP2 (053392, R54938), as well as the genomic DNA sequence of human OP2 (055395). Generic sequences given in R54939-40 accommodate homologies between OP1, OP2, OP3 and other morphogen Sequence 399 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4;

Murine osteogenic protein mOP2 and proteins having at least 70% homology with it are preferred morphogens for inclusion in new morphogen-enriched nutritional formulations. The formulations are dietary compositions suitable for people at risk for tissue damage due to protein energy malnutrition or to altered metabolism an infant or juvenile.

effects of cancer therapy.

Claim 35-36; Page 115-117: 151pp; English.

Morphogens comprising an amino acid sequence sharing at least 70% homology with Op-1, Op-2, CBMP2, BMP3(fx), Vq1(fx), Vgr(fx), DPP(fx), GDF-1(fx), 60A(fx) and at least 80% homology with BMP5(fx) are useful for maintaining the integrity of the gastrointestinal tract luminal lining in a mammal, including (1) limiting epithelial cell proliferation, (2) inhibiting ulcerative lesion formation, (3) inhibiting inflammation normally associated with ulcerative diseases, and/or (4) stimulating the repair of sequence 399 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  glalcalggghgprpp-htc-pqrrlg-arerrdmgreilavlglpgr-prpragpaaar 67

Page 75-77; 120pp; English.

This sequence represents the murine derived protein, osteogenic protein, mOP-2. The mature OP-2 protein was used as at least one subunit in the dimeric protein of the invention. This dimeric protein comprises a pair of protein subunits which are associated to give a structure with morphogenic activity. Each subunit comprises more than 100 amino acids having a pattern of
                                                                                                                                                                                                                            N-PSDB; 045119.
Maintaining integrity of gastrointestinal lining using a morphogen (stimulant) - for treating or preventing ulceration, also to inhibit endothelial cell proliferation and reduce side

                                                                                                                                                                                                                                                                                               cysteine residues characteristic of the morphogen family. Each subunit comprises a mature form of a subunit of a member of the morphogen family, non-covalently complexed with a peptide comprising a pro-region of a morphogenic family member, to form a complex more soluble in aqueous solvents than the uncomplexed subunits. The dimeric protein is useful in a therapeutic composition, pref. also containing a symptom-alleviating co-factor. The protein and corresponding antibody may be used in diagnostic assays, eg. to quantitate the amount of mature and soluble forms of morphogenic
                                                                                                                                                                                                                                                                        12 glalcalggghgprpp-htc-pgrrlg-arerrdmgreilavlglpgr-prpragpaaar 67

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mouse embryo full-length osteogenic protein Op-2 (W00239)
Mouse embryo full-length osteogenic protein Op-2 (W00239)
includes a pro-sequence and the morphogenically active mature
includes a pro-sequence (see also W00224) that includes a 7-cys C-terminal
domain. Op-2 can be expressed from intact or truncated cDNA
(T33444) in prokaryotic or eukaryotic host cells. Mature Op-2 and
other morphogens (see also W00221-35), partic. human Op-1 (W00221),
can be used to induce dentine morphogenesis, to seal dental
cavities and to desensitise teeth to pressure and/or temp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4.

Presenting for compounds which modulate morphogen expression - by incubating for compounds which modulate morphogen contain a forelular gene for morphogenic protein expression

Present general for morphogenic protein expression

Disclosure; Columns 67-70; 49pp; English.

CC Priceins are a group of morphogenically active proteins. Morphogens CC OP-2 proteins are a group of morphogenically active proteins. Morphogens care inactive when reduced, but are active as oxidised homodimers and when coxidised with other morphogens (e.g. W36853-62). Comparison of the amino coxidised with other morphogens (e.g. W36853-62). Comparison of the amino coxidised with other morphogens has identified a consensus 6-7.

Cysteine motif at the C-terminal. Morphogenic proteins such as OP-2 play an important role, not only in embryogenesis, but also in tissue and commanitement and repair in mammals. They induce a developmental corgan maintenance and repair in mammals. They induce a developmental corgan maintenance and repair in mammals. They induce a developmental cascade of tissue-specific morphogenesis in a mammal. A novel method is described for screening a candidate compound for the ability to modulate compound is incubated with epithelial cells which expressed by the cellular gene. A change in the level of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of or the amount of the protein certis are assayed for the presence of the candidate compound is indicative of the protein compound to modulate expr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4
